

Photo 22. Coarse caldera-margin fanglomerate (T_{pf}).

A. Coarse fanglomerate, containing sparse clasts of Fish Canyon Tuff (T_{fc}) along with predominant lava from the Conejos Formation; exceptionally indurated outcrop. Note hammer (circled) for scale. View to north from Cochetopa Pass road; north of Archuleta Creek, along east margin of Cochetopa Park caldera (CP).

B. Close-up of fanglomerate; hammer is adjacent to large clast of Fish Canyon Tuff (T_{fc}). North of Archuleta Creek, along east margin of Cochetopa Park caldera (CP).
